Brandywine Communications Expands Western U.S. Presence Through Strategic Partnership with TMS

[April 15, 2026] Brandywine Communications, a leading provider of precision timing and frequency synchronization solutions for defense, aerospace, and critical infrastructure applications, today announced a new strategic partnership with TMS. Under this agreement, TMS will represent Brandywine Communications across Arizona, New Mexico, Utah, and Colorado.

This partnership marks a significant step in Brandywine's continued expansion across the western United States, strengthening its regional presence and enhancing customer engagement within key defense and aerospace markets.

TMS brings extensive regional expertise, established relationships, and a strong track record of supporting advanced technological solutions in mission-critical environments. By leveraging TMS' local market knowledge and customer access, Brandywine aims to accelerate growth, improve responsiveness, and deepen its footprint across this strategic territory.

"Partnering with TMS enables us to extend our reach and better serve customers in the Southwest and Mountain regions," said David Trujillo, Regional Sales Director at Brandywine Communications. "Their deep understanding of the defense and aerospace ecosystem aligns perfectly with our mission to deliver high-performance timing solutions where precision and reliability are paramount."

The collaboration is expected to drive increased adoption of Brandywine's portfolio, including Modular Master Clocks, timing distribution systems, SOSA-aligned VPX radial clocks, and advanced synchronization technologies designed for demanding applications such as radar systems, secure communications, satellite ground systems, and electronic warfare platforms.

"This partnership with Brandywine Communications represents a strong alignment of capabilities and market focus," said Charlie Badzik, President of TMS. "We are excited to represent a company with such a strong reputation in precision timing and to support their continued growth across our territory."

As demand for resilient and assured Position, Navigation, and Timing (aPNT) solutions continues to grow, this partnership positions both organizations to better support customers navigating increasingly complex operational environments.

About Brandywine Communications

Brandywine Communications is a leading provider of precision timing and frequency solutions for defense, aerospace, and critical infrastructure applications. With over 30 years of experience, the company delivers innovative, high-reliability synchronization technologies

designed and manufactured in the United States. For more information, visit www.brandywinecomm.com.

About TMS

TMS is a Manufacturers' Representative Company serving high-technology customers in the Rocky Mountain region. TMS began as a Test and Measurement rep company in 1987 and added our TMS Systems Division in 2000. For more information, visit www.tmsales.com.
